

App on iPhone screen:

- Logo is squeezed
- White color in the corners

When opening app:

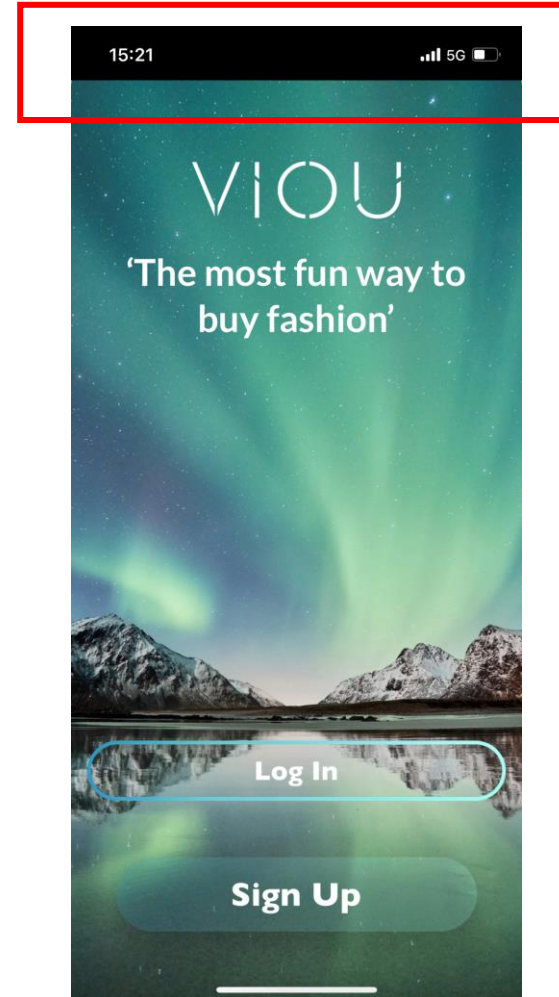

Delete first black screen and replace with VIOU animation instead (VIOU flying towards you)

kindly send us .gif for flying logo

Screen after opening screen:

Delete second green screen

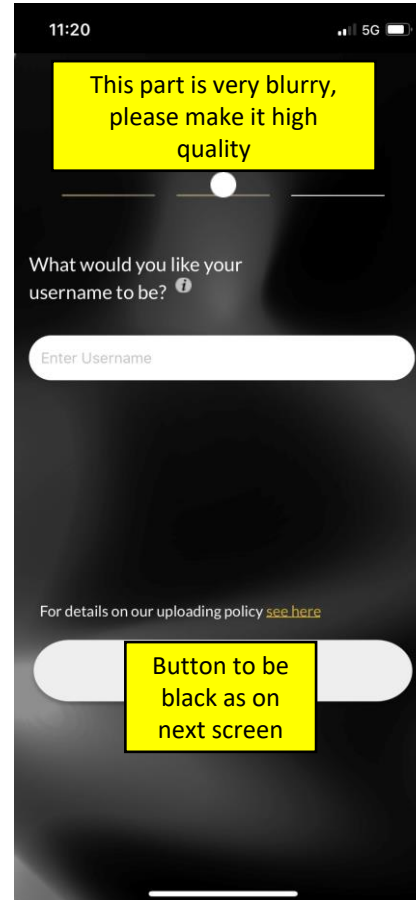

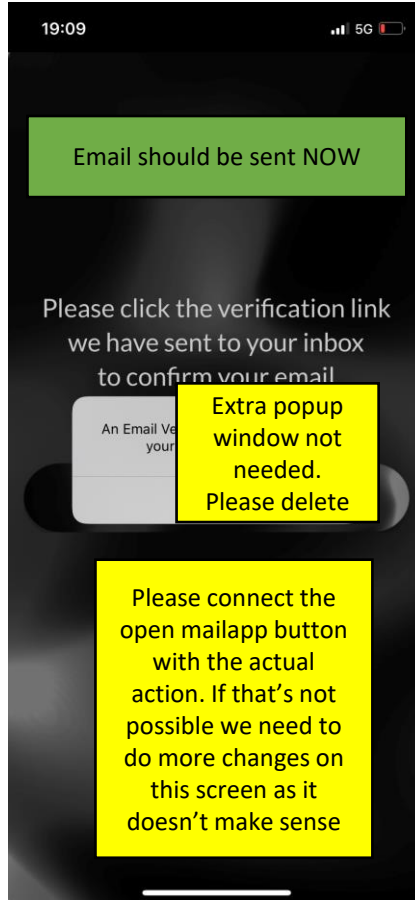

Formatting:

On my iPhone, the upper half is not filled with our app screen, but is black (at all time using the app)

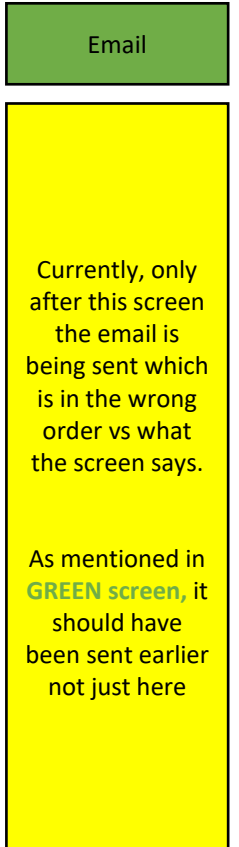

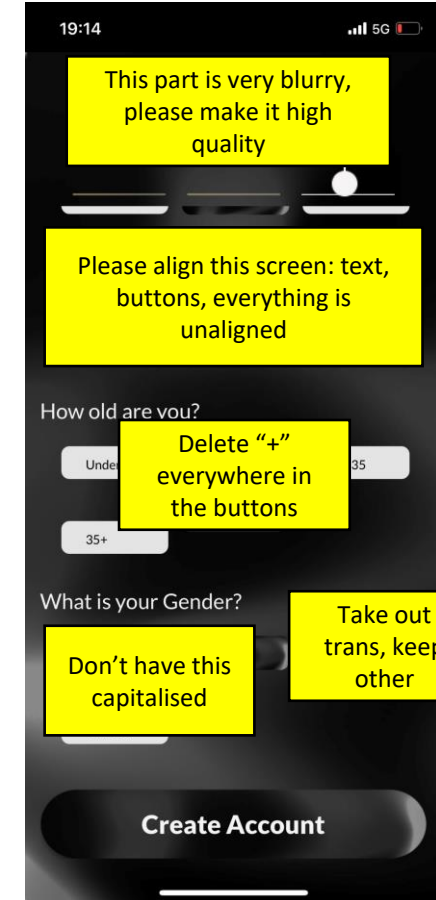

Can we please fix?

To be clear – this is an overall comment, still delete this screen

Screen after log in screen:

we develop according to figma design, Now we update and make align

When you zoom in in the **red area**, it's cut out and black (mentioned earlier already)

Live stream screen (top left of previous screen):

Take out "explore" on top left under the magnifying glass

Can we have a nice black picture for the profile pic?

Also delete the "Profile" word below the profile button/pic

See picture below

Comment shows 2 – why? Comment function doesn't work – any reason for that?

Pls delete "share" function as its not working

Photo not aligned in middle

Can you please ensure that the photo has always the same size? I.e. if there is no text below, no scrolling should be possible

Basket stops at counting after "1" – please fix

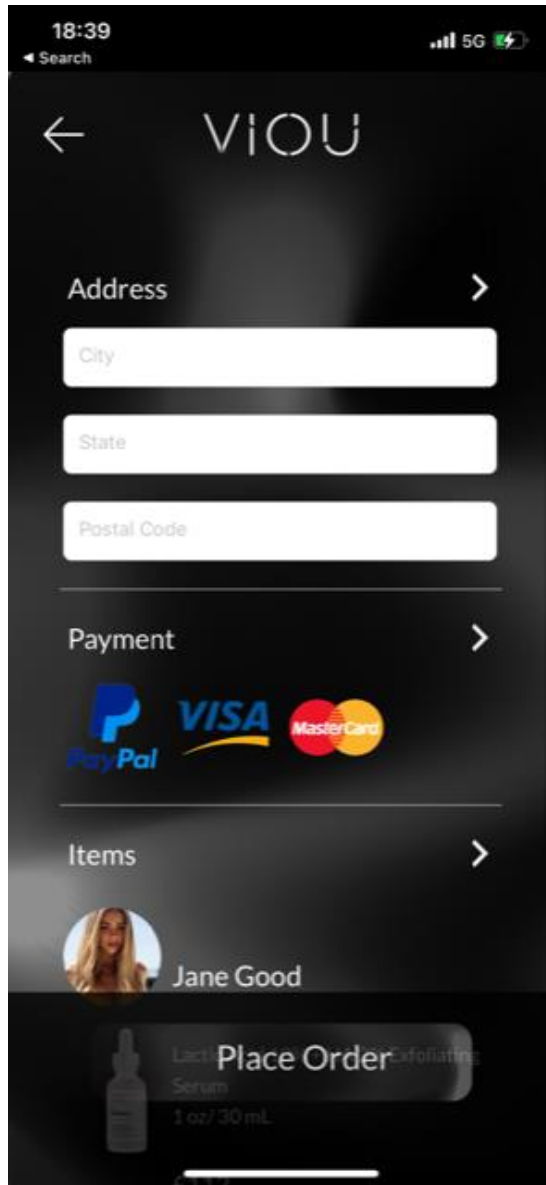

No background needed – it cuts off the page (and buttons) unnecessarily

IMPORTANT for the basket:

It currently counts wrong. It should count every single piece put in the basket (even if 10x the same item), instead of just one kind of item no matter how high the quantity. Can we please fix? Otherwise very confusing.

The address field doesn't work

Place Order

For the address, there is just city, state and postal code

Can we please replace state with street and house number and have another field below with apartment number (optional)

And then we need to just have a line below that says "United Kingdom" (just text) so its clear that only customers in UK can order

When typing in the address, it doesn't change in the shipping details.

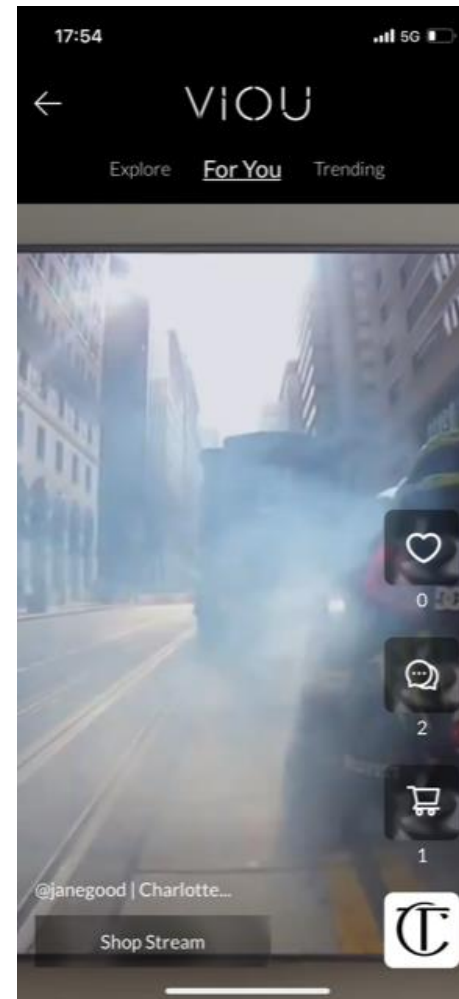

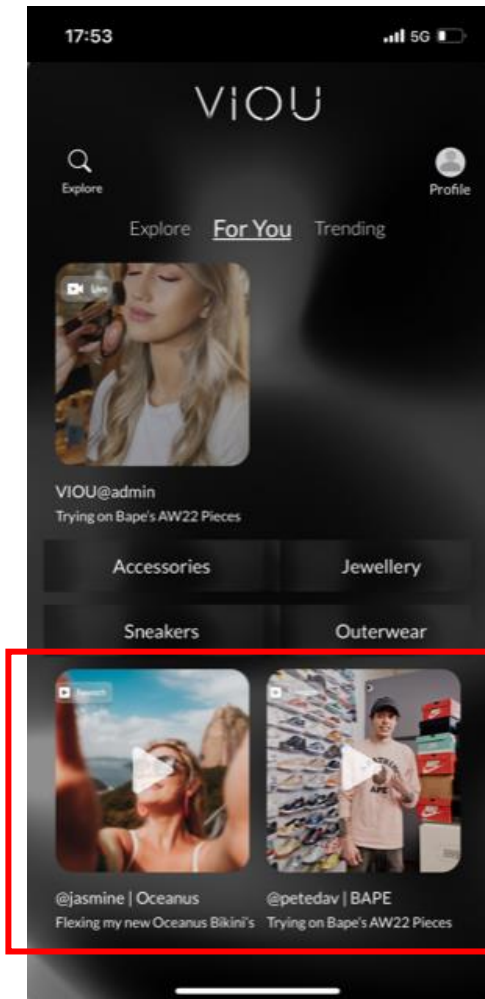

Its still just pre defined text there

Can we please fix this?

Please also add a line at the bottom of the page where it says:

"If you have any questions please contact us at +44 1305 235 330"

Add a whatsapp button next to it, so it can send a message directly to whatsapp from the app

For all videos in the lower part of the screen:

Idk why we have a car video in here – just doesn't make sense having this on a beauty app (I know its just a filler, but still doesn't make sense).

Can we please fill with sth fashion/ beauty related?

Overall comment:

Didn't we agree to replace the current design with the see through comments/ the screens I shared in the last pdf?

I have added the last comments to the end of this presentation to highlight what we discussed and has not been implemented in the past week

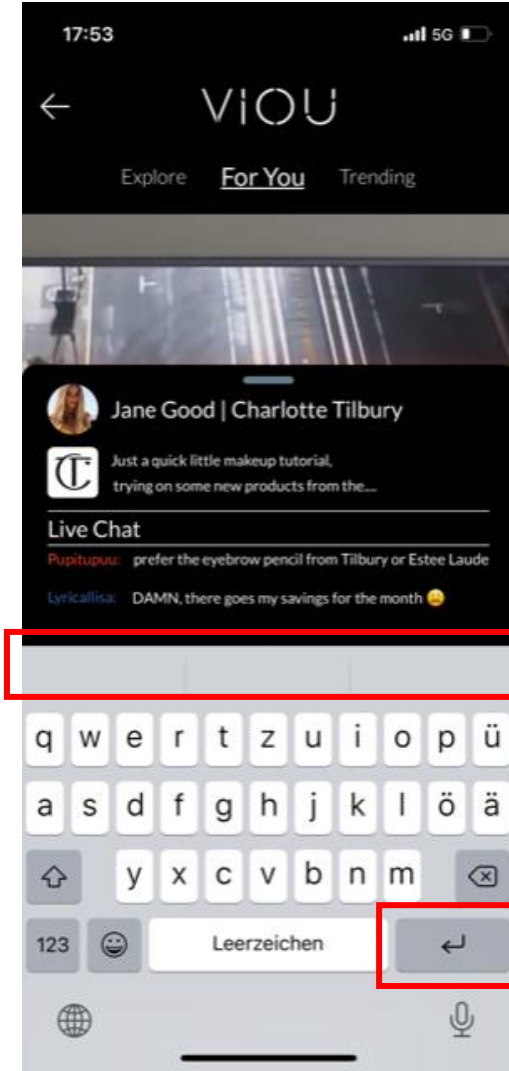

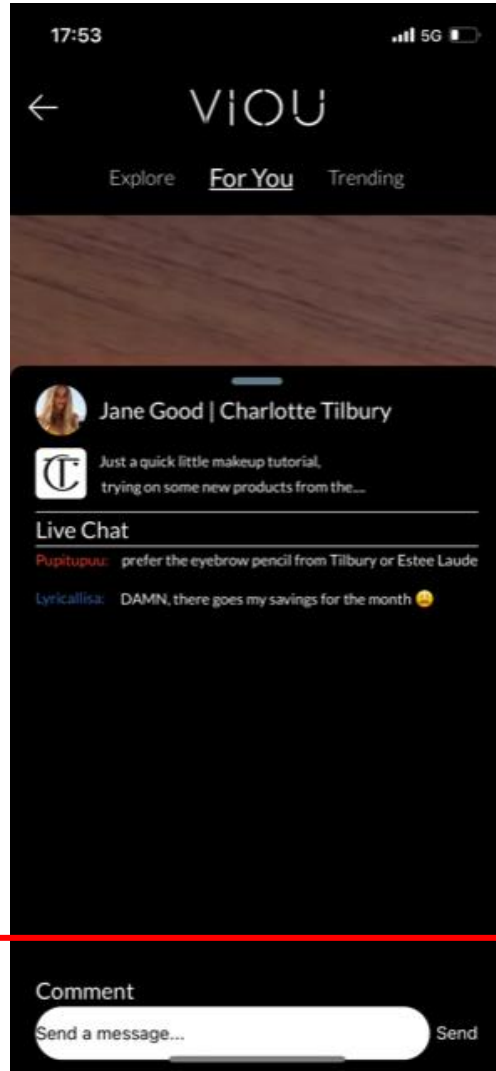

Comment function doesn't work properly

Overall comment:

Didn't we agree to replace the current comment design with the see through comments/ the screens I shared in the last pdf?

I have added the last comments to the end of this presentation to highlight what we discussed and has not been implemented in the past week

Can we have a clean design of the "send a message" text, it doesn't look very nice when its hitting the left corner

Commenting is problematic/ doesn't work:

When I click on the "send a message" field, the keyboard goes up, but the comment field disappears, so I cant see what I am typing

I can also not get out of the keyboard unless I click on the enter space, but it then also doesn't enter the text in the comment field

So I am basically blind texting/typing and need to go back and forth between enter and the comment field

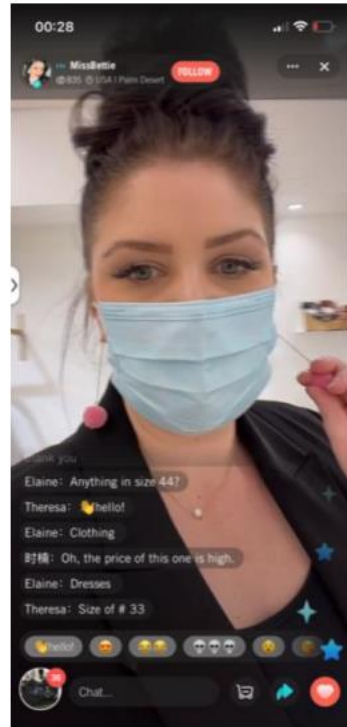

This is not usable

Previous comments/ pdf I shared

Overall comment:

Didn't we agree to replace the current comment design with the see through comments/ the screens I shared in the last pdf?

I have added the last comments to the end of this presentation to highlight what we discussed and has not been implemented in the past week

Livestreaming:

The screen to the left is from **shopshops** (Bruno and me also looked at Ntwrk)

Is it possible to integrate comments, shop and like buttons in this style?

Important components: live comments visible at all times in the screen, user can press like button multiple times

Most important:

The streamer/ admin needs to be able to see the comments when they go live so they can answer live questions/ comments

Is it possible to see in the comment field when a product was purchased/ put in the basket?

"A user has just added product x to the basket"

"Bruno has just bought y"

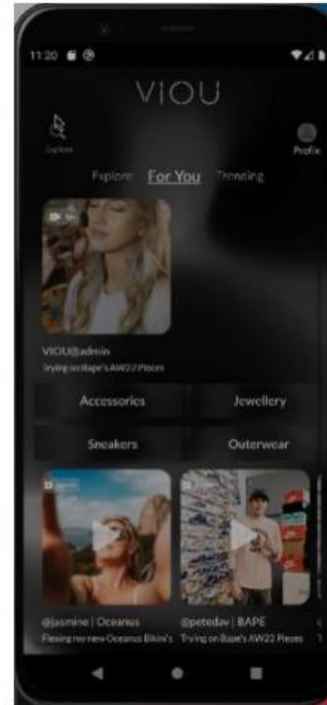

-> other question: are we allowed to disclose what users buy? If part of the Agora API, then should be ok

We would just need to implement the comment and like/ chat/ shop design – not the overall screen.

Please let me know if you need an individually designed screen for that

Can you please come back to me on these questions?

Menu page:

I understand all the videos here are just for illustration purpose which is fine.

My questions are:

What happens when there is a new stream added?

Where will it show? On the top row?

What happens when its over?

Can we replicate the bottom row (with scroll through to the right) for the top row?

So when a live is over it stays in the top row (I can rewatch right?) and when a new live is added the old goes to the right and the new one is added top left.

Can we add a date when it goes live (discussed with Bruno – have a little button top left of the video counting down by day “Tomorrow 8pm” -> I have added example to the right)?
